Professional Summary

React Developer with experience in building dynamic, scalable applications using React, Node.js, and modern JavaScript frameworks. Proven track record of enhancing user experience, optimizing performance, and implementing responsive designs. Adept at integrating APIs, state management (Redux/Context API), and component-based architecture to deliver seamless web solutions.

Work History

Greater Houston Retailers Association - Front End Developer
Houston, TX
11/2023 - Current

- Led development of React Native application modernizing order building software for warehouse worker scanning of water pallets, convenience store goods, and backtrack scanning of items that were previously unavailable across multiple orders simultaneously. Completely eliminated warehouse worker scan errors via validation and improved order pick speed by 40%.
- Modernized and custom stylized GHRA's career website in terms of mobile responsiveness, using CSS flexbox for an adaptive layout, on hover overlay interactivity, and developing their webpage according to a mockup provided
- Upgrading their client portal's quick links to a grid layout card display, simplifying navigation, programmed membership renewal reminders in PHP and forced redirects for deferred renewals after checking their account in SQL
- Simplified navigation reduced clicks-to-action by 34%, improving ease of use
- Automated renewal lock screens led to a 59% increase in on-time payments.
- Programmed a slider from scratch and updated site navigation to match mock ups for imminent site refresh

TexasExes - Web Developer
Austin, TX
09/2021 - 03/2022

- Programmed Longhorn Business Network listings to order businesses by proximity to searching user through JavaScript and open APIs. This increased successful business searches by 44%, reducing search time by 67%.
- Revised search results to display data uniformly and consistently with CSS fonts, sizes, colors, and layouts. Resulted in Reduced formatting inconsistencies, lowering user complaints by 47%
- Configuring redirects for charities and scholarships and auditing and updating lists of TexasExes government advocates

Education

2019
Thinkful
Online
Fullstack: JavaScript

2010
University of California, Berkeley
Berkeley, CA
Bachelor of Arts: Philosophy

ICare Pharmacy - Web Developer
Edmonton, AB
04/2019 - 09/2021

- Integrating and customizing WordPress and website plugins
- Using HTML, CSS, and JavaScript to provide a unique and engaging user interface
- Optimizing website for mobile responsiveness increasing user visit time duration on mobile by 55%

SimplyNUC - Web Developer
Round Rock, TX
09/2019 - 06/2021

- Developed custom reusable page templates and features to constantly extend website's functionality via PHP and JavaScript (e.g. page to programmatically display product details, images, and links, tool to compare product specifications, tool to make a product viewable in 360 degrees, updating the regular and sales prices for comparison as users change configuration options)
- Created and revised new products for upcoming product launches based on supervisor's and coworkers' feedback
- Reduced product page length from 10+ pages to 1 - 2, increasing engagement by 78%.
- Comparison tool led to a 46% increase in completed purchases.
- 360 viewer increased session duration by 68%, contributing to a 43% conversion rate boost.
- Custom bundle purchases increased by 29%, raising AOV by 23%
- Planned and documented tasks via Clickup and Gitlab

Self-employed - Freelance Developer
Houston, TX
01/2017 - 09/2019

- Developed websites from scratch for insurance, food truck, marketing firm, construction, auto shop, and non-profits.
- All websites made mobile responsive

Personal Projects

Victory History: https://www.victoryhistory.gg
Full-stack MERN application for managing personal game libraries

- Designed and implemented Twitch OAuth authentication, allowing users to securely log in, manage, sort, search, and filter their gaming history. User states managed via React Context.

Street Fighter 2 Themed Weighted Game Selector: https://sf2-weighted-rando-game-select.netlify.app/
Full-stack MERN app for random game selection based on user-assigned weights

- Developed authentication system with bcrypt and JWT, ensuring secure user login and data protection. Add weight to games and select them randomly. Games pulled from RAWG API via Axios. State managed via Context.

Fishybones: https://fishybones.netlify.app/
React single-page clone of the "Knucklebones" minigame from Cult of the Lamb

- Engineered interactive turn-based game logic using React Context to track active players, scores, and game states.
- Managed game flow with custom useEffect hooks, ensuring smooth updates to die values and animations during gameplay.
