PROJECTS

- **Government Unified Portal (GUP)**
  Description: It is an Oman government project for booking medical services online through their GUP Portal, mainly developed using Fragments and Liferay Objects completely using Liferay DXP 7.4 Portal
- **BlueDart Migration to Liferay**
  Description: BlueDart, a global logistics company known for secure and reliable courier delivery services, is migrating their website to Liferay DXP 7.4
- **Oman Medical Service Board**
  Description: It is a Medical Service Board under the Oman government, providing admissions and examination services for medical students in Oman. Our team developed the Form Builder module, enabling customization of forms to meet examiner specifications. The project also incorporated diverse workflows and utilized features of the Liferay DXP 7.4 portal
- **Aixtor Technologies Website**
  Description: It's a service company portfolio hosted on WordPress and powered by the React-based framework Frontity. The portfolio showcases the offerings of Aixtor Technologies.
- **Intranet Portal**
  Description: Centralized platform aimed at improving communication, collaboration, and employee engagement within organizations. This digital hub acts as a portal where employees can access resources, connect with colleagues, and stay updated on company news and developments.
- **Location Tracker**
  Description: Android application developed to retrieve user-provided longitude and latitude and display maps using Google Maps API. The location data is stored in Google Console.
- **SoloCoder**
  Description: This Android application is designed to teach programming languages such as C, C++, and Java, enabling students to grasp coding principles through practical exercises and theoretical concepts. It also offers certification upon completion.
